

## 20 Years of Safety Excellence – **January 2023: New Worker Safety & Health**

To kick off 2023, we are focusing on **new workers**. New workers are often the most vulnerable to accidents and injuries. In this month's kit we have videos, programs, and manuals, including a New Worker Safety Orientation video and several accompanying resources. This package of resources is meant to train new workers on how to identify common hazards in the mechanical industry, and how to protect themselves from those hazards. Topics covered include stop work authority, pre-task planning, PPE, working at heights, fall protection, fall prevention, power tool safety, hazard communication, housekeeping, and emergency procedures.
